

## VERITAS NetBackup from Symantec and Data Domain Optimize Fast, Reliable Backups and Replication in Your Data Center or Remote Office

Symantec™ and Data Domain® boast a proven track record in successful data protection for the enterprise. Combined, the VERITAS NetBackup® from Symantec software application and the Data Domain Enterprise Protection Storage systems deliver the industry's most scalable, highest-throughput data protection solution on the market today. Data Domain optimizes storage capacity, making retention and replication of backup data extremely cost and bandwidth-efficient by providing 20x data reduction. Enterprises can now retain months of full and incremental backup data in nearline storage, lowering the overall price/GB and simplifying management.

In addition, through its Data Involvement Architecture, the Data Domain systems perform continuous data integrity verification to ensure that the data you backed is actually recoverable. IT departments can expect a flexible backup and recovery environment that allows concurrent SAN backups, recoveries and cloning to tape.

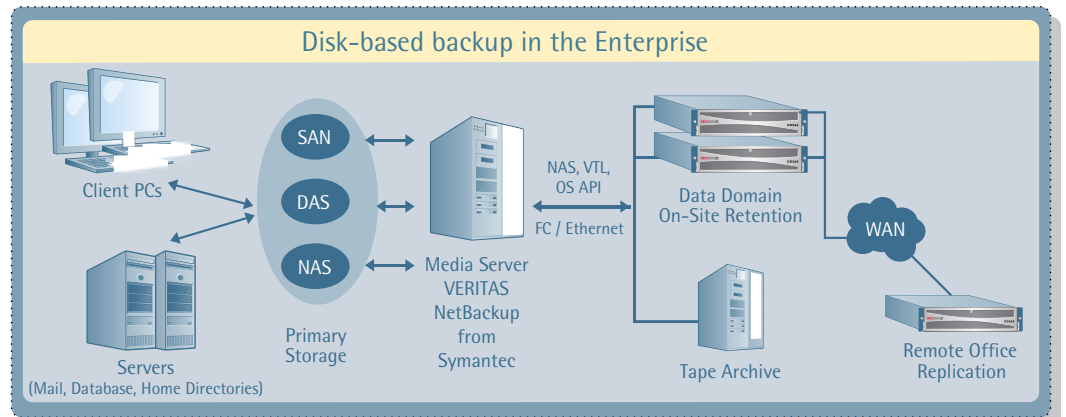

Together, Symantec and Data Domain improve *onsite* and *offsite* data protection by speeding up disk-to-tape copying and leveraging your existing backup software environment, which may also include tape devices.

VERITAS NetBackup from Symantec and Data Domain enable you to meet your

demanding service levels for faster backups and restores and greatly improve your disaster recovery capabilities.

Use the Data Domain protection storage systems and VERITAS NetBackup from Symantec to protect enterprise or developer application data, including:

- Oracle and other databases
- Exchange and .PST files
- VMware .vmdk files
- Home directories
- Developer files such as ClearCase, CVS
- Enterprise applications such as CRM and ERP

**VERITAS NetBackup from Symantec and Data Domain Protection Storage:  
An Integrated Solution**

Complementary NetBackup Features	Data Domain Customer Benefits
NetBackup recognizes the Data Domain systems as a disk storage unit	Easy for IT staff to integrate into current NetBackup environment that may include data center or remote office backup
NetBackup has the ability to perform incremental, full and synthetic-full backups	With 20x data reduction—enabled through Global Compression technology—Data Domain systems have the ability to store many full backups, enabling you to more easily recover a file system dataset from a specific backup.
File level recoveries via NetBackup	Since file recoveries are five times more common than full system recoveries, file recoveries on Data Domain systems are orders-of-magnitude faster than tape automation. With throughput rates up to 800 GB/hr, file recoveries are reduced from hours to minutes.
NetBackup allows up to four inline copies	Data Domain systems speed up disk-to-tape backup and the combined solution complements your tape backup architecture.
NetBackup enables end-user initiated restores thanks to easy-to-use GUI	Data Domain systems ensure fast end-user recoveries—without tape drive contention.
NetBackup allows a media verification option	Through the Data Domain system's Data Invulnerability Architecture, backup images are automatically and continuously verified as recoverable. Additionally, NetBackup confirms that the network and client didn't cause any problems and this is much faster with disk storage.
